

PiA[®] Physik im Advent[®]
Noch 24 Experimente bis Weihnachten

Here we go again:

Physics Experiments in Advent

This year, Ms. and Mr. Santa come to you in a coronavirus-compliant manner via video. Once again, 24 entertaining physics experiments will be offered this year with the motto "24 more experiments until Christmas" in collaboration with several national and international physical societies and STEM initiatives. There are many great prizes to be won.

"PiA - Physik im Advent" is an Advent calendar of a special kind: a physics Advent calendar. Behind every little door there is some education and fun. From 1 to 24 December, small physics experiments that can be carried out with standard household materials will be presented every day as videos by Mr. Santa or Ms. Santa. Participants do the experiments and answer a question on the PiA website. The next day, there will be a solution video and, if your answer is correct, a point. At Christmas, all participants will receive individual certificates. For participants with high scores, prizes will be raffled off in the categories of individual, school class or school, for which numerous donors have donated in cash or kind. In addition to iPods, books, and experimental kits, prizes include a ride in a hot air balloon, a flight in a glider or a trip to Dallas to watch NBA basketball games with Dirk Nowitzki. Anyone who registers at <https://www.physics-in-advent.org> can participate. Registration is **free** and opens on **1 November**, PiA starts on 1 December. **Posters and flyers** can be requested **free of charge** via the contact form on the PiA website.

„PiA - Physik im Advent" is aimed at children and young people aged between 11 and 18 years, and will take place for the ninth time in 2021. Last year, a new record was set with **62,000 registered participants, 49% of whom were girls, and 2.3 million visitors overall**. In addition to children and teenagers, all parents, teachers, students or adults interested in physics phenomena are invited to participate. "PiA - Physics in Advent" is intended to awaken the joy in everyone of experimenting for themselves and offer entertainment and learning at the same time. The calendar is available in English and German.

The project is supported by numerous people from science, television or politics. The patron is the biophysicist and Nobel Prize winner Professor Erwin Neher.

"PiA - Physik im Advent" is offered by the University of Göttingen with the support of the Wilhelm und Else Heraeus-Stiftung in cooperation with the Deutsche Physikalische Gesellschaft (DPG), the Österreichische Physikalische Gesellschaft (ÖPG), the Schweizer Physikalische Gesellschaft (SPS), the Netherlands' Physical Society (NNV), the European Physical Society (EPS), the Association of German Engineers (VDI), the German Aerospace Centre (DLR), the MNU Association for the Promotion of MINT Teaching, IUCAA (India), Global Sphere network, Science on Stage, Leifiphysik, Komm mach MINT and MINT Zukunft schaffen and takes place in cooperation with the successful project "Maths in Advent" by the German Mathematicians Association (DMV).
